***The abstract***

- **Topics classification**

- Worldwide legislations, market impact and powertrain development trends
- New engines and powertrains
- Internal combustion engines evolution and new concepts
- After-treatment and real driving emissions
- Powertrain topologies and transmissions
- Hybrid powertrain and energy management
- Powertrain efficiency improvement and thermal energy recovery
- System engineering (including reliability and safety topics)
- Low carbon fuels, alternative energies (including hydrogen), well-to-wheel approach
- Electric machines and power electronics
- Battery systems and auxiliary devices
- Semiconductor components and packaging
- High volume production process in power electronics
- Light vehicles (small EV, 2-3-4 wheelers, ...)
